THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

# **PART B - FEE(S) TRANSMITTAL**

**Complete and send this form, together with applicable fee(s), to:** Mail **Mail Stop ISSUE FEE**  
**Commissioner for Patents**  
**P.O. Box 1450**  
**Alexandria, Virginia 22313-1450**  
 or Fax **(571)-273-2885**

**INSTRUCTIONS:** This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

## Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 722 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 722 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

**DETAILED ACTION**  
**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Donald Firca (Reg. No. 48,140) on 8/28/08.

The application has been amended according to the faxed claims (copy attached), sent to the examiner by Mr. Donald Firca (Reg. No. 48,140) on 8/28/08, as follows:

In the claims:

Claim 1, *'a diversity receiver used in a CDMA communication system comprising: a first antenna for receiving signals from a first base station of a plurality of base stations, the plurality of base stations also including a second base station which is different from the first base station; a second antenna for receiving signals from the second base stations station, wherein the signals received by the first and second antennas are both intermittent CDMA signals; a received field strength measuring unit for measuring a first received field strength indicating a field strength of the intermittent CDMA signal received at said first antenna and a second received field strength indicating a field strength of the intermittent CDMA .signal received at said second antenna, wherein said intermittent CDMA signals are sent from any one of the base stations every designated*

slot cycle in standby mode; an information storage unit for storing; a base station information acquiring unit for acquiring first base station information included in the intermittent CDMA signal received by the first antenna and second base station information included in the intermittent CDMA signal received by the second antenna and storing the first base station information and the second base station information in said information storage unit; and an antenna selection unit for selecting one of said first antenna and second antenna at a higher received field strength based on the first received field strength of the intermittent CDMA signal including the first base station information and the second received field strength of the intermittent CDMA signal including the second base station information which are stored in said information storage unit immediately prior to start of a phone conversation when a transition is made from standby mode to the phone conversation, wherein the first received field strength and the second received field strength, wherein said first base station information is included in the signal which is sent from the first base station and received at said first antenna, and wherein said second base station information is included in the signal which is sent from the second base station and received at said second antenna' **has been changed to** ---a diversity receiver used in a CDMA communication system comprising: a first antenna for receiving signals from a first base station of a plurality of base stations, the plurality of base stations also including a second base station which is different from the first base station; a second antenna for receiving signals from the second base stations station, wherein the signals received by the first and second antennas are both intermittent CDMA signals; a received field

*strength measuring unit for measuring a first received field strength indicating a field strength of the intermittent CDMA signal received at said first antenna and a second received field strength indicating a field strength of the intermittent CDMA signal received at said second antenna, wherein said intermittent CDMA signals are sent from any one of the base stations every designated slot cycle in standby mode; an information storage unit for storing the first received field strength and the second received field strength; a base station information acquiring unit for acquiring first base station information included in the intermittent CDMA signal received by the first antenna and second base station information included in the intermittent CDMA signal received by the second antenna and storing the first base station information and the second base station information in said information storage unit; and an antenna selection unit for selecting one of said first antenna and second antenna at a higher received field strength based on the first received field strength of the intermittent CDMA signal including the first base station information and the second received field strength of the intermittent CDMA signal including the second base station information which are stored in said information storage unit prior to start of a phone conversation when a transition is made from standby mode to the phone conversation, wherein said first base station information is included in the signal which is sent from the first base station and received at said first antenna, and wherein said second base station information is included in the signal which is sent from the second base station and received at said second antenna---.*

Claim 5, 'a diversity reception method implemented by a diversity receiver used in a CDMA communication system, the receiver including first and second antennas for receiving signals from base stations including a first base station and a second base station, said method comprising the steps of: receiving, at the first antenna during standby mode, a first intermittent CDMA signal including first base station information from the first base station; receiving, at the second antenna during standby mode, a second intermittent CDMA signal including second base station information from the second base station; measuring a first received field strength indicating a field strength of the first intermittent CDMA signal received at the first antenna and a second received field strength indicating a field strength of the second intermittent CDMA signal received at a second antenna, wherein said intermittent signals are sent from the first and second base stations every designated slot cycle in standby mode; storing the first received field strength and the second received field strength; acquiring the first base station information and the second base station information, and storing the first base station information and the second base station information, wherein the first base station information is included in the signal which is sent from the first base station and is received at said first antenna, and wherein the second base station information is included in the signal which is sent from the second base station and is received at said second antenna; and selecting one of said first antenna and said second antenna at a higher received field strength based on the first received field strength of the signal including the first base station information and the second received field strength of the signal including the second base station information which are stored immediately prior

to start of a phone conversation when a transition is made from standby mode to the conversation' **has been changed to** ---a diversity reception method implemented by a diversity receiver used in a CDMA communication system, the receiver including first and second antennas for receiving signals from base stations including a first base station and a second base station, said method comprising the steps of: receiving, at the first antenna during standby mode, a first intermittent CDMA signal including first base station information from the first base station; receiving, at the second antenna during standby mode, a second intermittent CDMA signal including second base station information from the second base station; measuring a first received field strength indicating a field strength of the first intermittent CDMA signal received at the first antenna and a second received field strength indicating a field strength of the second intermittent CDMA signal received at a second antenna, wherein said intermittent signals are sent from the first and second base stations every designated slot cycle in standby mode; storing the first received field strength and the second received field strength; acquiring the first base station information and the second base station information, and storing the first base station information and the second base station information, wherein the first base station information is included in the signal which is sent from the first base station and is received at said first antenna, and wherein the second base station information is included in the signal which is sent from the second base station and is received at said second antenna; and selecting one of said first antenna and said second antenna at a higher received field strength based on the first received field strength of the signal including the first base station information and the

*second received field strength of the signal including the second base station information which are stored immediately prior to start of a phone conversation when a transition is made from standby mode to the conversation---*.
